

Monarch Migration Station

Test your video knowledge by circling the correct terms that finish the sentences.

- Cone Flower/Milkweed is the only plant that monarch caterpillars consume, making it critical for its growth.
- Monarchs from the First/Fourth generation will be the group of monarchs that migrate to Mexico.
- Monarchs can migrate up to 3,000/10,000 miles from as far north as Greenland /Canada to central Mexico.
- Monarchs over-winter in the Oak/Oyamel Fir forest.
- The monarch butterfly has been petitioned to be Listed/Removed as federally threatened species.

monarchwatch.org is a great resource to use when learning about monarch butterflies (*Danaus plexippus*) and their marvelous migration. Using data from the website, draw an arrow that shows the path monarchs take during the fall migration on the map below.

Go to the resources tab at journeynorth.org and find **Conservation: How Can You Help**

Below list three strategies that are being used by communities and citizens to help the monarch butterfly.

- _____
- _____
- _____
